

Activity 2.2

1) Taste necessary \rightarrow Taste unnecessary \rightarrow Tasteless unnecessary \rightarrow Intolerable

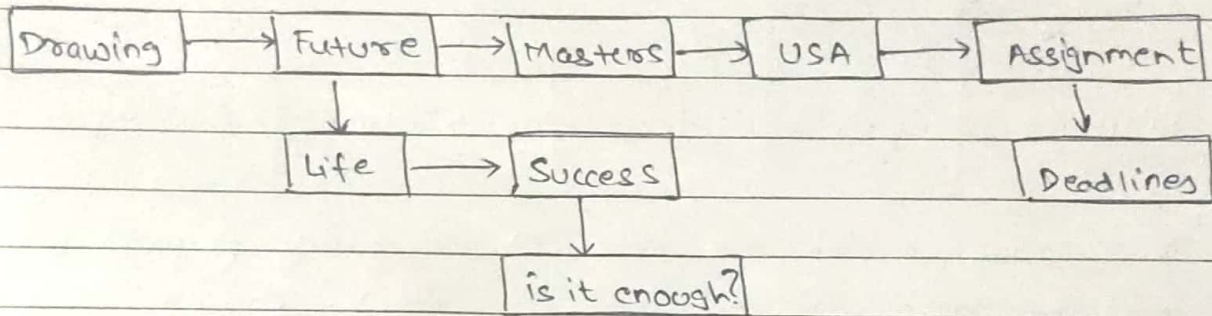

\rightarrow This sequence can be observed for every physical facility involving taste. For eg. Any fast food - Noodles. A plate of Noodles is tasty and necessary. After a point of 2 plates, it still has good taste but it is unnecessary and at last, it becomes intolerable.

Other examples include:

- TV Programs
- Music
- Perfume
- Spa

\rightarrow Continuous happiness is definitely not possible through the sensation by consuming physical facility. We saw that for the start it might look that physical facilities might give continuous happiness but it doesn't. They rather become intolerable. I believe that continuous happiness is confined to priorities one has on a long term basis.

→ 2)

→ a)

Imagination is an inseparable part of life. Imaginations do continue all the time but topics differ from time to time according to the current scenarios. Thinking about the future continues all the time whereas not so important things come and go.

→ b)

The reason behind limited imagination on some topics is due to the topics not so important. Some reasons also includes the continuous fluctuations of mind by which it automatically transfers to more important and devotes more time to it.

→ c)

No, all imaginations are not well connected. Brain never remains stable on one thing. It jumps from one onto other. It also leads to unfulfilled gaps between two thoughts that might occur simultaneously.

→ d)

The exercise helped me gather my thoughts and map it to a page. It also helped me to realize the instability of my brain. It went from one thought to other very quickly. It diverted from positive to negative outlook really fast which might be a point of concern.
